

Richlawn E-Z Green

Colorado's Premium Turf Grass Seed Blend

- * Blended for Colorado's front range lawns
- * Beautiful dark-green color
- * Excellent drought tolerance
- * Heat and cold tolerant
- * Resistant to necrotic ring spot
- * Enhanced with endophytes for insect resistance
- * Superior density
- * Advanced wear tolerance
- * Excels with low maintenance

58.78% Kokomo Perennial Ryegrass
9.89% Baron Kentucky Bluegrass

29.39% Serengeti Tall Fescue
1.94% Inert

Richlawn E-Z Green turf blend is a fast germinating, low maintenance mix of three exceptional cool season turf varieties that excel in Colorado's semi-arid climate. As an added feature, this blend is naturally resistant to insects and NRS (necrotic ring spot).

On new turf areas, the addition of organic material (3-4 cu yards per 1,000 sq ft) and tilling to a depth of 6 " will greatly enhance the ability of the turf to develop a thick root system, which will save water and reduce the incidence of weeds.

**When overseeding, cover seed with 1/8 inch of organic material*

** Pro-Rich Turf Food can be used when planting at 1/2 the normal application rate.*

Seeds must be covered lightly and kept consistently moist until germination occurs. The seed will begin to germinate within 7-10 days when planted in the spring, summer or early fall. After germination, gradually increase watering duration and decrease frequency to encourage development of a thick, deep root system. Avoid all use of herbicides for at least 6 weeks after germination.

** Use regular applications of Richlawn Pro-Rich Turf Food for best results.*
